## Investment Manager Report

September was a zero-sum game for Norron Select, with a flat return of 0.0 percent, while the SBX Index rose by 1.4 percent and the VINX Nordic fell by 0.8 percent. Like August, the market was characterized by significant volatility at both the index level and in underlying holdings. During the initial weeks, the stock market dropped sharply in a short period, with defensive stocks outperforming cyclical ones. September was also marked by numerous profit warnings from both consumer and industrial companies. Moreover, we can observe that market growth expectations are clearly in a declining phase.

Regarding fund-specific news, Valmet received an order worth over 1 billion euros, easing market concerns about the company's order intake and capacity utilization, while cash flow is expected to strengthen. The stock performed strongly on the news and was the largest contributor in the long portfolio, followed by Epiroc and Atlas Copco. Similarly, Bufab, Vitec, and Danske Bank made solid contributions in the short portfolio. On the weaker side, AstraZeneca, Fasadgruppen, and Novo Nordisk underperformed in the long portfolio, while Balder, Latour, and Assa Abloy were among the weaker holdings in the short portfolio.

The fund's net exposure is between 30-35 percent, while gross exposure is 200 percent. We continue to take stock-specific short positions and work with both index futures and options to protect the fund against sharp market declines.

**EU Taxonomy Explanation**

The EU taxonomy is a classification framework that determines whether a specific economic activity is environmentally sustainable. The purpose of the framework is to accelerate the transition towards a more sustainable economy. The taxonomy framework currently includes six environmental objectives, which are: 1. Climate change mitigation, 2. Climate change adaptation, 3. Sustainable use and protection of water and marine resources, 4. Transition to a circular economy, 5. Pollution prevention and control, and 6. Protection and restoration of biodiversity ecosystems. For an economic activity to be considered environmentally sustainable ("aligned"), it must significantly contribute to one of the above environmental objectives. The activity must also not cause significant harm to any of the other objectives. Additionally, the company must meet certain social minimum safeguards.

The taxonomy framework is an important tool for Norron in our assessment of sustainable investments. The fund's alignment indicates the proportion of the fund's investments that meet the established criteria for environmental sustainability according to the EU taxonomy regulation. The table also shows whether these activities are classified as "green", enabling, or transitional activities. For complete taxonomy data, we refer to the fund's sustainability report available on Norron's website, and Norron SICAV's annual report.

**Sustainability Data Explanation**

Norron invests towards the 17 Sustainable Development Goals (SDGs) and Agenda 2030. For an investment to be considered sustainable, it must contribute to one of the SDGs as well as to one of Norron's sustainable investment objectives. The objectives are as follows: Climate & environment, Healthy & prosperous societies, Innovative & sustainable solutions, Sustainable cities & infrastructure, and Sustainable finance. Sustainable investments must also meet minimum social safeguards and must not cause significant harm on sustainability factors. The table on page one reports the fund's weighted average proportion of sustainable investments for the previous year.

Norron has also established three entity level sustainability goals extending to 2040, with sub-targets set for 2026. These goals state that by 2040, 100% of portfolio companies should 1) set climate goals validated by the Science Based Targets initiative, 2) sign the UN Global Compact, and 3) disclose material sustainability risks. The table on page one shows how the fund contributed (weighted average) to Norron's sustainability goals in the previous year.

**About Norron**

Norron Asset Management, founded in 2010, is a Nordic asset manager with offices in Stockholm and Oslo. The company manages six funds with a focus on the Nordic capital markets. The fund offering includes absolute return funds as well as actively managed equity funds and fixed income funds. Norron is owned by the founders, staff and the Norwegian listed industrial investment company Aker ASA. The funds are distributed mainly by market-leading Nordic savings platforms with a focus on occupational pension capital. Norron's geographical focus is the Nordic region and the managerial style is characterized by flexibility, openness and transparency. The company's combined expertise with well-defined guidelines combined with a healthy approach to management, which includes a rigorous approach to risk-taking, a sophisticated use of derivatives and a careful stock selection process, benefits our unit holders through a historically very competitive return.

To read more about the company, we refer to the website [www.norron.com](http://www.norron.com).
