Investment Manager Report

In October, Norron Select was down by 0.87 percent, compared to the SBX Index, which fell by 3.53 percent. The reporting period was marked by significant volatility both at the index level and within the broader market. Although the stock market generally declined due to reduced risk-taking ahead of the US election, the drop was particularly noticeable among smaller companies, which underperformed relative to the broader market.

The best contributors in the long book were Fasadgruppen, Ericsson, Handelsbanken, Icelandic Salmon, and Vestum. In the short book, the top holdings included Investor, Lifco, Nibe, Latour, and Balder. However, returns were negatively impacted by Valmet, one of the larger holdings, which issued a profit warning at the beginning of the month. This was in contrast to the reversed profit warning and a large order that has boosted the stock's performance over the last quarter. October's profit warning, however, resulted in a 20 percent drop in Valmet's share price over a short period, impacting the fund negatively by 100 basis points. Yet, we believe that Valmet is undervalued given its growth potential, which we expect will accelerate over the next 2–3 years. Valmet constituted the weakest holding in the long book, along with Atlas Copco, Alcadon, Hexagon, and Getinge. In the short book, DNB, Engcon, and Lagercrantz contributed negatively to the fund's return.

Regarding portfolio composition, there have been no major changes since September. Net exposure is approximately 40 percent, while gross exposure stands at 200 percent. We remain active in both futures and options hedging to protect the fund against significant declines.

SDG Allocation 2023 (weighted average fund proportion)

EU Taxonomy Explanation

The EU taxonomy is a classification framework that determines whether a specific economic activity is environmentally sustainable. The purpose of the framework is to accelerate the transition towards a more sustainable economy. The taxonomy framework currently includes six environmental objectives, which are: 1. Climate change mitigation, 2. Climate change adaptation, 3. Sustainable use and protection of water and marine resources, 4. Transition to a circular economy, 5. Pollution prevention and control, and 6. Protection and restoration of biodiversity ecosystems. For an economic activity to be considered environmentally sustainable ("aligned"), it must significantly contribute to one of the above environmental objectives. The activity must also not cause significant harm to any of the other objectives. Additionally, the company must meet certain social minimum safeguards.

The taxonomy framework is an important tool for Norron in our assessment of sustainable investments. The fund's alignment indicates the proportion of the fund's investments that meet the established criteria for environmental sustainability according to the EU taxonomy regulation. The table also shows whether these activities are classified as "green", enabling, or transitional activities. For complete taxonomy data, we refer to the fund's sustainability report available on Norron's website, and Norron SICAV's annual report.

Sustainability Data Explanation

Norron invests towards the 17 Sustainable Development Goals (SDGs) and Agenda 2030. For an investment to be considered sustainable, it must contribute to one of the SDGs as well as to one of Norron's sustainable investment objectives. The objectives are as follows: Climate & environment, Healthy & prosperous societies, Innovative & sustainable solutions, Sustainable cities & infrastructure, and Sustainable finance. Sustainable investments must also meet minimum social safeguards and must not cause significant harm on sustainability factors. The table on page one reports the fund's weighted average proportion of sustainable investments for the previous year.

Norron has also established three entity level sustainability goals extending to 2040, with sub-targets set for 2026. These goals state that by 2040, 100% of portfolio companies should 1) set climate goals validated by the Science Based Targets initiative, 2) sign the UN Global Compact, and 3) disclose material sustainability risks. The table on page one shows how the fund contributed (weighted average) to Norron's sustainability goals in the previous year.

About Norron

Norron Asset Management, founded in 2010, is a Nordic asset manager with offices in Stockholm and Oslo. The company manages six funds with a focus on the Nordic capital markets. The fund offering includes absolute return funds as well as actively managed equity funds and fixed income funds. Norron is owned by the founders, staff and the Norwegian listed industrial investment company Aker ASA. The funds are distributed mainly by market-leading Nordic savings platforms with a focus on occupational pension capital. Norron's geographical focus is the Nordic region and the managerial style is characterized by flexibility, openness and transparency. The company's combined expertise with well-defined guidelines combined with a healthy approach to management, which includes a rigorous approach to risk-taking, a sophisticated use of derivatives and a careful stock selection process, benefits our unit holders through a historically very competitive return.

To read more about the company, we refer to the website www.norron.com.
